

IS 312 Web Application Development

Lab sheet 6: Introduction to ASP.NET

Objective

The objective of today's lab is to get you started working with ASP.NET. By the end of this lab you should be able to create a new website, use the source view and design view to edit your page and use the code-behind file to write your application logic.

You may refer to the book to review all the steps needed to write a simple ASP.NET page.

Exercise 1

Create a website that has a simple log in page as shown below:

A screenshot of a web form with a light gray border. It contains two text input fields. The first is labeled "First Name:" and the second is labeled "Last Name:". Below the input fields is a button labeled "Log in".

Once the user hits log in button, a welcome message is shown as below:

A screenshot of the same web form as above, but now filled with data. The "First Name:" field contains the text "Marwah" and the "Last Name:" field contains "Alaofi". The "Log in" button is still present. Below the button, the text "Welcome, Marwah Alaofi" is displayed.
